340 E. Foothill Blvd, Claremont CA, 91711

cngo@hmc.edu – 424.603.1376

EDUCATION

Harvey Mudd College

Expected Graduation May 2020

Joint Computer Science and Mathematics (B.S.)

Major GPA 3.73

Relevant Coursework: Computer Insights, Data Structures and Program Development, Discrete Mathematics, Algorithms, Intermediate Linear Algebra, Intermediate Probability, Independent Study: Intro to Statistical Learning, Machine Learning, Logic and Computability, Abstract Algebra, Real Analysis

EXPERIENCE

Software Development Engineer, Intern – Seattle, WA

June 2019 — August 2019

Remitly, Inc - Pricing Team

- Implemented endpoint to fetch history of pricing rules and developed the accompanying UI to reference that history, leading to greater ease-of-use for analysts to set the offered exchange rates
- Implemented scrapers that retrieved pricing data from competitor, increasing data processing throughput
- Developed infrastructure that persisted transacted quotes and implemented endpoint to access said database, allowing for after-the-fact access to processed transactions and better readability of the economics logic behind a quote

Computer Science Tutor/Grader – Claremont, CA

August 2017 — Present

Computer Science Department

- Tutor students and grade assignments for Intro to Computer Science (Fall 2017), Computer Insight (Spring 2017), Data Structures (Fall 2018) and Algorithms (Fall 2019)

Sports Data Analyst – Claremont, CA

August 2017 — January 2018

Claremont-Mudd-Scripps Mens' Basketball

- Scraped play-by-play logs of games from 2016-2017 season of the Mens' Basketball Team
- Automated statistical analysis of the performance of five-player lineups in Python
- Applied analysis to generate practical team strategy recommendations and presented findings to Head Coach

PROJECTS

Predicting Book Ratings with Collaborative Filtering – Python

April 2019 — May 2019

- Applied matrix factorization model with bias to predict users' ratings of books
- Applied grid-search to fine-tune the model and achieved RMSE of 3.4

Chunky String Data Structure – C++

April 2018 — May 2018

- Implemented generic Chunky List data structure that dynamically stores arbitrary data in a linked list of arrays
- Wrote constant-time insert and erase functions for the data structure

March Madness Modeling and Prediction – Python

March 2017

- Scraped statistics from teams in the past 6 tournaments in NCAA D1 Tournament
- Applied genetic optimization to generate weight vectors predicting winner in head-to-head matchup with >60% accuracy

SKILLS

Programming Languages

Python, Java, C++, JavaScript, Racket, R, HTML/CSS

Software Libraries

JDBI, Lombok, Jackson Annotations, Numpy, Scikit-Learn, React, Surprise

Utilities

L^AT_EX, Git, Markdown, Forge, Jenkins

EXTRACURRICULAR ACTIVITY & LEADERSHIP

West Dorm President

May 2019 — Present

Disciplinary Board Chair

May 2018 — May 2019

Honor Board Class of 2020 Representative

January 2017 — May 2018
